MASTER PROGRAM IN COMPUTER APPLICATION

COURSE DESCRIPTION

The Computer Applications curriculum is designed to provide students with the skills required to run computer application software. Among the applications covered are word processing, spreadsheets, databases, desktop publishing, the Internet, and Windows operating systems. Lessons will prepare students to function in a range of working contexts. Knowing how to use and operate a computer is useful for virtually everyone because computers are necessary tools in almost every profession. This course will teach you the foundations of computer networking, software, and hardware. You will also learn the essentials of Windows, Microsoft Office, and creating your own web pages. Finally, you will research safe computer usage practises and consider computer-related ethical considerations.

Application software, in particular, refers to end-user programmes designed to boost productivity in a variety of industries. The tools can be used to generate publications, spreadsheets, databases, and articles, as well as to conduct internet research, send emails, make images, manage businesses, and even play games. Application software, which can be as simple as a calculator app or as complex as a word processing app, is designed to perform a certain function.
